SJ-509ES

Crosslinkable Semiconductive Shielding Compound

Overview

SJ-509ES is a specially formulated crosslinkable semiconductive polyethylene copolymer compound for strippable insulation shielding of medium voltage EPR insulated power cable. (up to 46 kV).

SJ-509ES is specifically developed to provide a super-smooth surface yielding virtually perfect interface between the extruded shield and the and the insulation.

SJ-509ES has stable volume resistivity characteristics at elevated temperatures.

Specifications

ICEA S-93-639, ICEA S-94-649
IEC 60502-2
AEIC CS8
UL 1072

Properties

This TDS is typiacal data only and are not to be construed as specifications. Users should results their own test. Tests are conducted on compression molded slabs cured 15 minutes at 180℃.

Physical	**Value (English)**	**Value (SI)**	**Test Method**
density	1.16 g/㎤	1.16 g/㎤	ASTM D 1505
Moisture Content	500 ppm	500 ppm	ASTM D 6869
Melt Flow Rate[125°C(257°F)/10.0 kg]	0.90 g/10min	0.90 g/10min	ASTM D 1238
Stripping Force[with EPR, 250mm/min, width 10mm, 23°C, 180angle]	11.43 lbs/in	2.00 kN/m	ASTM D 903
Brittleness temperature	<-40 °C	<-40 °C	ASTM D 746
Metal ion content	<500 ppm	<500 ppm	

Mechanical	**Value (English)**	**Value (SI)**	**Test Method**
Ultimate Tensile Strength	1740 psi	12.0 Mpa	ASTM D 638

SEJI CHEMICAL CO,. LTD.

SJ-509ES

Crosslinkable Semiconductive Shielding Compound

Processing

SJ-509ES provides excellent surface finish and outstanding output rates over a broad range of extrusion a broad range of extrusion conditions.
SJ-509ES requires melt stock temperatures in the range of 110℃ to 120℃ for best results.
Lower melt temperatures may result in a unmelt extrudate and higher melt temperatures may result in extrudate scorch and It can even trigger die-drools.
The curing configuration the maximum cable surface temperature in the curing zone should be maintained below 200ºC (392 ºF). If the surface temperature of the cable in the curing zone is over 200ºC, it may cause cracks in the cable, so careful temperature control required. Dehumidified hopper drying at 25~40℃ for upto 4 hours prior to extrusion might be employed to remove moisture. Specific processing conditions depend on equipments and cable dimensions.
Optimum conditions by conventional practices should be established.

Packing & Storage

Packed in 600kg polybag lined carton box.
Recommended maximum storage period is 12months unopened and in original packaging after the manufacture.

Stored at room temperatures 73 ℉ 23 ℃
The shelf life of this product is 1 year from the date of manufacture.

Safety

Please contact Seji Chemical for Material Data Sheet and Safety.

Disclaimer
